

The Centro Integrado de Formación Profesional de Mantenimiento y Servicios a la producción has received two plant mechanics of sanitary, heating and air conditioning systems (m/f) from Germany (Adolf-Kolping-Berufskolleg, Kerpen) for a 4-week internship. This exchange turned out to be positive for the students and the training companies. The German students successfully completed a Spanish language course parallel to their stay in Oviedo. Once they (and the company) had overcome the first difficulties of communication the internship was very successful. The students felt well inside the company and the Centro Integrado.

In the plumbing and heating field there were some difficulties to find companies because of the English language for communication. After all, those Spanish companies who received students were finally highly satisfied with the internship.

The CIFP de Mantenimiento y Servicios also has send two electrical engineering students to Germany. Also this internship was highly positive, particularly the learning outcomes in social and personal competences. The students made lots of experiences in cultural life and learned about the difference between the world of work in Germany and Spain.

In summary it is very important to have specific and equal procedures of organizing internships as offered in the ECVET concept. So it is fundamental to have equal standards and rules.

**IES Campanillas**, VET School in Malaga, offer the following specialties:

- Technician in Telecommunications Installations
- Technician in Microcomputer Systems and Networks
- Higher Technician in Development of Web Applications

Thanks to the ITBSE, teachers and students of these studies have had the great opportunity to look deeply in the specification of their studies definitions throught the comparation with the ITBSE matrix. As IES Campanillas is also teaching with the bilingual education program, English language has been also a motivation to involved much better in the different tasks. IES Campanillas VET school is located in the Andalusia Technologic Park, and ITBSE helped to meet new IT companies that have colaborated in parts of the projects.

Adolf Kolping Beruf Skolleg and IES Campanillas has been collaborating with mobilities for the last ten years. Now, in the context of the ITBSE project, a group of german students has done their training period in differents companies and institutions of Malaga, and in this case, looking carefully the profesional competences related with the project. One of the experience has been a new creation primary school called CEIP Rectora Adelaida de la Calle. This experience gave the students the opportunity to watch within the case how to configure and maintain a real IT system in a real institution. Both students and institution has defined this as a success.

On the other hand, IES Campanillas has opened their connections and collaborations with very interesting partners all over Europe. Through knowing in-place all these institutions gave a global vision of VET education that can help to improve each one.
